PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in SQL, Python, Power BI and Excel across business analytics projects involving 1.8M+ records - including a fully-automated fund-scoring pipeline for 33 mutual funds and a \$51.9M pricing-gap analysis on 500K+ auction records. Currently pursuing an MBA in Analytics and Data Science alongside a Computer Science degree. Comfortable owning the full analytics lifecycle: ETL, data modelling, DAX-driven KPI reporting and dashboard design. Prior experience in structured data-quality evaluation for ML training pipelines.

TECHNICAL SKILLS

SQL & Databases: SQL, MySQL

Python: Pandas, NumPy, Statistics, Exploratory Data Analysis, Data Cleaning, Data Wrangling

BI & Visualization: Power BI, DAX, Excel, Power Query, Dashboard Design, KPI Reporting

Data & BI Concepts: ETL, Data Modelling, Star Schema, Business Intelligence, Reporting, Data Visualization

Other Tools: Jupyter Notebook, PyCharm, Matplotlib, Streamlit

AI/ML: Prompt Engineering, RLHF

EXPERIENCE

Prompt Engineer | Green Rider Technology *Sep 2024 - Mar 2025*

- Evaluated 100+ data samples against a structured 1-5 scoring rubric, applying consistent criteria to generate clean, high-quality labeled data for downstream model training.
- Promoted to Reviewer, auditing submitted ratings for rubric inconsistencies and quality issues, functioning as a QA layer before data was accepted into the training pipeline.
- Trained 10+ team members on data quality standards and structured evaluation criteria, lifting average task rubric scores from 3.5 to ~4.0.

PROJECTS

Large Cap Mutual Fund Analytics Dashboard | *Python, Power BI, DAX*

- Designed and built a multi-page Power BI dashboard scoring 33 Indian Large-Cap mutual funds on a transparent, fully-disclosed "Overall Peer Score," using weighted Min-Max normalization across 3Y/5Y/10Y CAGR, Sharpe ratio and maximum drawdown, benchmarked against NIFTY 50 TRI.
- Automated the end-to-end data pipeline in Python, fetching NAV history via API for all 33 schemes and computing rolling CAGR, Sharpe ratio and drawdown metrics, with renormalization logic to handle funds with incomplete history.
- Grounded the scoring framework in real financial-markets practice - CAGR, Sharpe ratio, maximum drawdown and NIFTY 50 TRI benchmarking - rather than a single return-based ranking.

AtliQ Business Insights 360 | *SQL, Power BI, DAX*

- Built an ETL workflow to transform 1.8M+ rows of raw SQL data into Power BI, designing a star-schema data model with defined fact-dimension table relationships for reliable, scalable reporting.
- Developed 50+ DAX measures supporting 10 KPIs across Finance, Sales, Marketing and Supply Chain, covering revenue, profitability and operational performance views for business stakeholders.
- Designed a drill-through reporting flow connecting executive-level KPI summaries with department-level transaction details, enabling root-cause analysis without leaving the dashboard.

Car Sales MMR Analysis | *Python, Pandas, EDA*

- Cleaned and transformed 501,166 wholesale auction records, retaining 89.8% of approximately 558K raw rows while resolving data-quality issues and engineering features including price-to-MMR ratio, vehicle age and condition category.
- Estimated a \$51.9M aggregate pricing gap across 500K+ transactions by comparing seller prices with MMR market benchmarks, with pricing gaps of 2.7-11.2% depending on vehicle condition.
- Identified vehicle condition as the strongest price driver, with a 10.9 percentage-point difference between Poor and Excellent condition categories through hypothesis-driven EDA and multivariate analysis.

EDUCATION

MBA - Analytics and Data Science | **Manipal University Jaipur**

CGPA: 8.1/10 | Jul 2025 - Present

B.Tech - Computer Science and Engineering | **Acropolis Institute of Technology and Research, Indore**

CGPA: 7.87/10 | Oct 2021 - Jun 2025

CERTIFICATIONS

Data Analytics Bootcamp - Codebasics | Excel, SQL, Power BI, Python

Generative AI Leadership Professional Certificate - Coursera | Average Score: 93%

ACHIEVEMENTS

- Ranked Top 10 among 100+ teams at an IIIT Nagpur hackathon by solving a live problem statement within a fixed time constraint.
- 1st place among 20+ teams in a UI/UX competition at Manipal University Jaipur.
- Trained 100+ students in Prompt Engineering as an IEEE member.
